

jQuery Event Handling

Part 2

SENG 4640

Review

- Previously we saw how to use jQuery to retrieve and modify DOM elements and add event listeners
- What other types of events can we handle?

User Events in the Browser

Event Type	Events
Mouse	click, dblclick, mousedown, mouseup, mouseover, mouseout

User Events in the Browser

Event Type	Events
Mouse	click, dblclick, mousedown, mouseup, mouseover, mouseout
Keyboard	keydown, keypress, keyup

User Events in the Browser

Event Type	Events
Mouse	click, dblclick, mousedown, mouseup, mouseover, mouseout
Keyboard	keydown, keypress, keyup
Form	focus, blur, change, reset, submit

User Events in the Browser

Event Type	Events
Mouse	click, dblclick, mousedown, mouseup, mouseover, mouseout
Keyboard	keydown, keypress, keyup
Form	focus, blur, change, reset, submit
Window / Element	load, resize, scroll, unload

Male

Dog Cat Bird

Happy Cute Smart

I'd like to buy a new animal.

    }
});
</script>
```

Handle checks boxes changes events

```
<p>
I'd like to buy a new <span id="featureSpan"></span>
<span id="genderSpan"></span> <span id="speciesSpan">animal</span>.

<script>
. . .
var allChecked = [];

$( 'input:checkbox' ).change(function() {
    var value = $(this).val();
    if ($(this).prop('checked')) {
        allChecked.push(value);
    }
    else {
        var index = allChecked.indexOf(value); if
        (index != -1)
            allChecked.splice(index, 1);
    }
    $('#featureSpan').html('');
    for (var i = 0; i < allChecked.length; i++) {
        $('#featureSpan').append(allChecked[i]); if
        (i < allChecked.length - 1)
            $('#featureSpan').append(', ');
        else
            $('#featureSpan').append(' ');
    }
});
</script>
```

an array to keep all checked checkboxes' values

```
<p>  
I'd like to buy a new <span id="featureSpan"></span>  
<span id="genderSpan"></span> <span id="speciesSpan">animal</span>.
```

```
<script>  
. . .  
var allChecked = [];
```

```
$( 'input:checkbox' ).change(function() {  
    var value = $(this).val();  
    if ($(this).prop('checked')) {  
        allChecked.push(value);  
    }  
    else {  
        var index = allChecked.indexOf(value); if  
        (index != -1)  
            allChecked.splice(index, 1);  
    }  
    $('#featureSpan').html('');  
    for (var i = 0; i < allChecked.length; i++) {  
        $('#featureSpan').append(allChecked[i]); if  
        (i < allChecked.length - 1)  
            $('#featureSpan').append(', ');  
        else  
            $('#featureSpan').append(' ');  
    }  
});  
</script>
```

bind input elements with checkbox type to the change event

```
<p>
I'd like to buy a new <span id="featureSpan"></span>
<span id="genderSpan"></span> <span id="speciesSpan">animal</span>.

<script>
. . .
var allChecked = [] ;

$( 'input:checkbox' ).change(function() {
    var value = $(this).val();
    if ($(this).prop('checked')) {
        allChecked.push(value);
    }
    else {
        var index = allChecked.indexOf(value); if
        (index != -1)
            allChecked.splice(index, 1);
    }
    $('#featureSpan').html('');
    for (var i = 0; i < allChecked.length; i++) {
        $('#featureSpan').append(allChecked[i]); if
        (i < allChecked.length - 1)
            $('#featureSpan').append(', ');
        else
            $('#featureSpan').append(' ');
    }
});
</script>
```

if this element has been checked, add its value to
the array (push adds an element to the end of an
array)

```
<p>
I'd like to buy a new <span id="featureSpan"></span>
<span id="genderSpan"></span> <span id="speciesSpan">animal</span>.

<script>
. . .
var allChecked = [] ;

$( 'input:checkbox' ).change(function() {
    var value = $(this).val();
    if ($(this).prop('checked')) {
        allChecked.push(value);
    }
    else {
        var index = allChecked.indexOf(value);
        if (index != -1)
            allChecked.splice(index, 1);
    }
    $('#featureSpan').html('');
    for (var i = 0; i < allChecked.length; i++) {
        $('#featureSpan').append(allChecked[i]); if
        (i < allChecked.length - 1)
            $('#featureSpan').append(', ');
        else
            $('#featureSpan').append(' ');
    }
});
</script>
```

remove the value from the array if the change was unchecked. splice remove 1 (could be more) item starting from index

```
<p>
I'd like to buy a new <span id="featureSpan"></span>
<span id="genderSpan"></span> <span id="speciesSpan">animal</span>.

<script>
. . .
var allChecked = [] ;

$( 'input:checkbox' ).change(function() {
    var value = $(this).val();
    if ($(this).prop('checked')) {
        allChecked.push(value);
    }
    else {
        var index = allChecked.indexOf(value); if
        (index != -1)
            allChecked.splice(index, 1);
    }
    $('#featureSpan').html('');
    for (var i = 0; i < allChecked.length; i++) {
        $('#featureSpan').append(allChecked[i]); if
        (i < allChecked.length - 1)
            $('#featureSpan').append(', ');
        else
            $('#featureSpan').append(' ');
    }
});
</script>
```

add the checked items to the span

```
<p>
I'd like to buy a new <span id="featureSpan"></span>
<span id="genderSpan"></span> <span id="speciesSpan">animal</span>.

<script>
. . .
var allChecked = [] ;

$( 'input:checkbox' ).change(function() {
    var value = $(this).val();
    if ($(this).prop('checked')) {
        allChecked.push(value);
    }
    else {
        var index = allChecked.indexOf(value); if
        (index != -1)
            allChecked.splice(index, 1);
    }
    $('#featureSpan').html('');
    for (var i = 0; i < allChecked.length; i++) {
        $('#featureSpan').append(allChecked[i]); if
        (i < allChecked.length - 1)
            $('#featureSpan').append(', ');
        else
            $('#featureSpan').append(' ');
    }
});
</script>

        passwordField.removeClass("errorBox").addClass("goodBox");
    }
    return false;
});
</script>
```

use selector to select the user password input element

```
<script>

$("button[name='submit']").click(function() {
    var passwordField = $("input[name='password']");
    var password = passwordField.val();
    var isOkay = true;
    if (password.length < 10) {
        isOkay = false;
        $('#atLeast10Chars').show();
    }
    if (/^\d/.test(password) == false) {
        isOkay = false;
        $('#needsNumber').show();
    }
    if (isOkay == false) {
        $('#successMessage').hide();
        $('#errorMessage').show();
        passwordField.removeClass("goodBox").addClass("errorBox");
    }
    else {
        $('.errorText').hide();
        $('#successMessage').show();
        passwordField.removeClass("errorBox").addClass("goodBox");
    }
    return false;
});
</script>
```

get the value of the password field

```
<script>

$("button[name='submit']").click(function() {
    var passwordField = $("input[name='password']");
    var password = passwordField.val();
    var isOkay = true;
    if (password.length < 10) {
        isOkay = false;
        $('#atLeast10Chars').show();
    }
    if (/^\d/.test(password) == false) {
        isOkay = false;
        $('#needsNumber').show();
    }
    if (isOkay == false) {
        $('#successMessage').hide();
        $('#errorMessage').show();
        passwordField.removeClass("goodBox").addClass("errorBox");
    }
    else {
        $('.errorText').hide();
        $('#successMessage').show();
        passwordField.removeClass("errorBox").addClass("goodBox");
    }
    return false;
});
</script>
```

define a boolean isOkay variable to check whether the password is validate or not. By default is true

```
<script>

$("button[name='submit']").click(function() {
    var passwordField = $("input[name='password']");
    var password = passwordField.val();
    var isOkay = true;
    if (password.length < 10) {
        isOkay = false;
        $('#atLeast10Chars').show();
    }
    if (/^\d/.test(password) == false) {
        isOkay = false;
        $('#needsNumber').show();
    }
    if (isOkay == false) {
        $('#successMessage').hide();
        $('#errorMessage').show();
        passwordField.removeClass("goodBox").addClass("errorBox");
    }
    else {
        $('.errorText').hide();
        $('#successMessage').show();
        passwordField.removeClass("errorBox").addClass("goodBox");
    }
    return false;
});
</script>
```

if the password length is less than 10, set isOkay as false and show its error message element

```
<script>

$("button[name='submit']").click(function() {
    var passwordField = $("input[name='password']");
    var password = passwordField.val();
    var isOkay = true;
    if (password.length < 10) {
        isOkay = false;
        $('#atLeast10Chars').show();
    }
    if (/^\d/.test(password) == false) {
        isOkay = false;
        $('#needsNumber').show();
    }
    if (isOkay == false) {
        $('#successMessage').hide();
        $('#errorMessage').show();
        passwordField.removeClass("goodBox").addClass("errorBox");
    }
    else {
        $('.errorText').hide();
        $('#successMessage').show();
        passwordField.removeClass("errorBox").addClass("goodBox");
    }
    return false;
});
</script>
```

use regular expression to check whether the password
is all digits or not

```
<script>

$("button[name='submit']").click(function() {
    var passwordField = $("input[name='password']");
    var password = passwordField.val();
    var isOkay = true;
    if (password.length < 10) {
        isOkay = false;
        $('#atLeast10Chars').show();
    }
    if (/^\d/.test(password) == false) {
        isOkay = false;
        $('#needsNumber').show();
    }
    if (isOkay == false) {
        $('#successMessage').hide();
        $('#errorMessage').show();
        passwordField.removeClass("goodBox").addClass("errorBox");
    }
    else {
        $('.errorText').hide();
        $('#successMessage').show();
        passwordField.removeClass("errorBox").addClass("goodBox");
    }
    return false;
});
</script>
```

is password is not valid, show the error message and
hide the success message and make it a errorBox
message (red)

```
<script>

$("button[name='submit']").click(function() {
    var passwordField = $("input[name='password']");
    var password = passwordField.val();
    var isOkay = true;
    if (password.length < 10) {
        isOkay = false;
        $('#atLeast10Chars').show();
    }
    if (/^\d/.test(password) == false) {
        isOkay = false;
        $('#needsNumber').show();
    }
    if (isOkay == false) {
        $('#successMessage').hide();
        $('#errorMessage').show();
        passwordField.removeClass("goodBox").addClass("errorBox");
    }
    else {
        $('.errorText').hide();
        $('#successMessage').show();
        passwordField.removeClass("errorBox").addClass("goodBox");
    }
    return false;
});
</script>
```

if the input password is validate, hide all errors,
show the success message and make it a goodBox
message (green)

```
<script>

$("button[name='submit']").click(function() {
    var passwordField = $("input[name='password']");
    var password = passwordField.val();
    var isOkay = true;
    if (password.length < 10) {
        isOkay = false;
        $('#atLeast10Chars').show();
    }
    if (/^\d/.test(password) == false) {
        isOkay = false;
        $('#needsNumber').show();
    }
    if (isOkay == false) {
        $('#successMessage').hide();
        $('#errorMessage').show();
        passwordField.removeClass("goodBox").addClass("errorBox");
    }
    else {
        $('.errorText').hide();
        $('#successMessage').show();
        passwordField.removeClass("errorBox").addClass("goodBox");
    }
return false;
});
</script>
```

return false prevents the page reload

Summary

- jQuery can be used to retrieve and modify DOM elements and add event listeners
- We have seen how to handle events from the mouse, keyboard, and forms

Review: Part 2 - jQuery

- **JavaScript:** a general-purpose, easy-to-use programming language
- **DOM:** representation of structure of HTML page, which can be manipulated using JavaScript
- **jQuery:** library that simplifies accessing/using the DOM
